1. Polecenie:

Celem polecenia było stworzenie drzewa decyzyjnego na podstawie danych ze zbioru Melanoma, który jest zbiorem wbudowanym w pakiet R i zawiera dane nt. chorych na czerniaka.

2. Wprowadzone komendy:

install.packages("C50")
install.packages("mlr")
library("mlr")
library("MASS")
library("C50")
data(Melanoma)

head(Melanoma) - *pierwsze wprowadzone dane*

Melanoma\$thickness <- factor(Melanoma\$thickness) – *zmiana danych w faktor* treeModel <- C5.0(x=Melanoma[,-6], y=Melanoma\$thickness) - *utworzenie drzewa decyzyjnego*

treeModel – *załadowanie drzewa decyzyjnego* summary(treeModel) – *podsumowanie drzewa decyzyjnego* plot(treeModel) – *wykres drzewa decyzyjnego*

3. Wyniki:
